

Outdoor Heating

Make winter safer with intelligent outdoor heating

Danfoss provides efficient and fully automatic heating systems, cables and thermostats to remove snow and ice from pavements, driveways and roofs. This not only eliminates slippery pavements and dangerous icicles, but also prevents frost damage to gutters, drain pipes, water pipes, tiles and brickwork.

Our thermostats and sensors detect snow and temperature changes and switch the heat on or off as required in the areas that need a touch of warmth. Only the very minimum of energy is used to achieve optimal results.

Ask your installer about:

EFTC cable + EFIT 850 thermostat.

Why choose Danfoss ice and snow melting systems?

1. Safety is key

- Prevent ice-related accidents
- Avoid frost damage

2. Convenient and easy

- Worry-free winters
- Avoid the work of salting your driveway

3. Economical solution

- Minimum energy consumption
- Save time and money on maintenance

Achieve comfort and energy savings today
